

The steps below outline integrating MobLab with your specified Canvas course. Before starting this process, a member of your institution's Canvas Administrator team will need to create and send a Canvas Instance Developer Key and ID to [ims@moblab.com](mailto:ims@moblab.com). Please see the Canvas Administrator instructions for more details.

When you create your instructor account, be sure to use the populated **School or Organization** field to associate your account with your institution's Canvas settings.

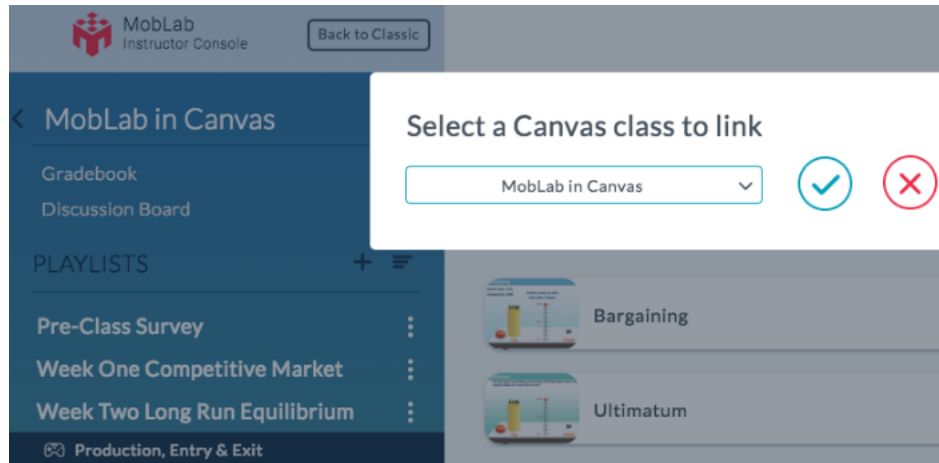

1. Create your MobLab class and from the newly created Class Dropdown, select **Set up Canvas**. This option will only appear if your institution supports MobLab Canvas functionality. *\*NOTE: To update or change your institution affiliation, click on the account icon at the top-right of the instructor console.*

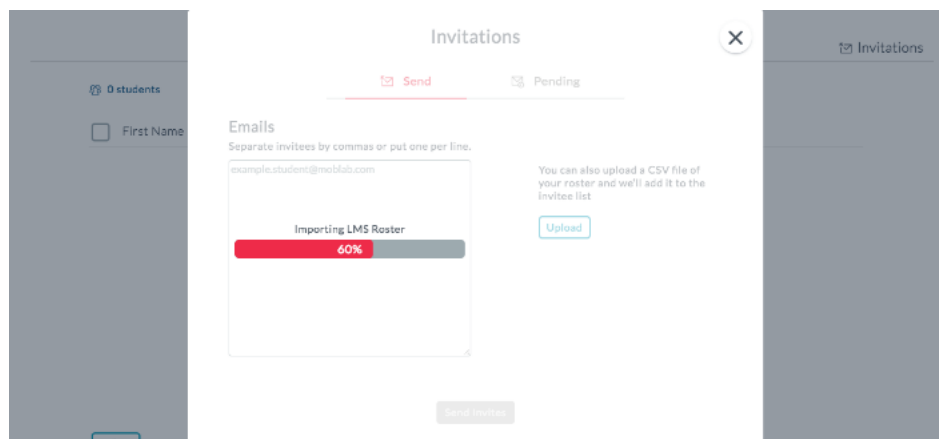

2. **Authorize** MobLab in your Canvas instructor account.

3. **Select** the desired class to link.

4. Now that your class is linked, again click the Class Dropdown menu to load the roster. In the roster pop-up, use the **Invitations** button at the top-right to import your Canvas Roster and **send** invitations to students.

*\*NOTE: This is an important step to ensuring students are using the correct email for their MobLab student accounts.*

5. After you have completed some games or surveys and your MobLab grade columns are created, you may **Sync** your MobLab gradebook to Canvas.
